SIGRACET® GDL

Optimized gas diffusion layers for PEM and DMFC fuel cell applications

↑ SIGRACET GDL optimized gas diffusion layers

Advantages

- Microporous layer improves stack performance and durability
- Consistent quality from our high volume continuous manufacturing line
- Optimized for performance under all operating conditions
- Standard materials available from inventory
- Compatible with 5-layer MEA technology

Grades

The first appended letter in the product nomenclature depicts the PTFE wt% in the substrate.

The second appended letter depicts the type and formulation of the microporous layer (MPL).

Standard SIGRACET GDL type:

GDL AA is our fully graphitized carbon fiber substrate.
 GDL BA is our hydrophobized substrate (5 wt% PTFE).
 GDL BC is our hydrophobized substrate (5 wt% PTFE) furnished with a MPL.

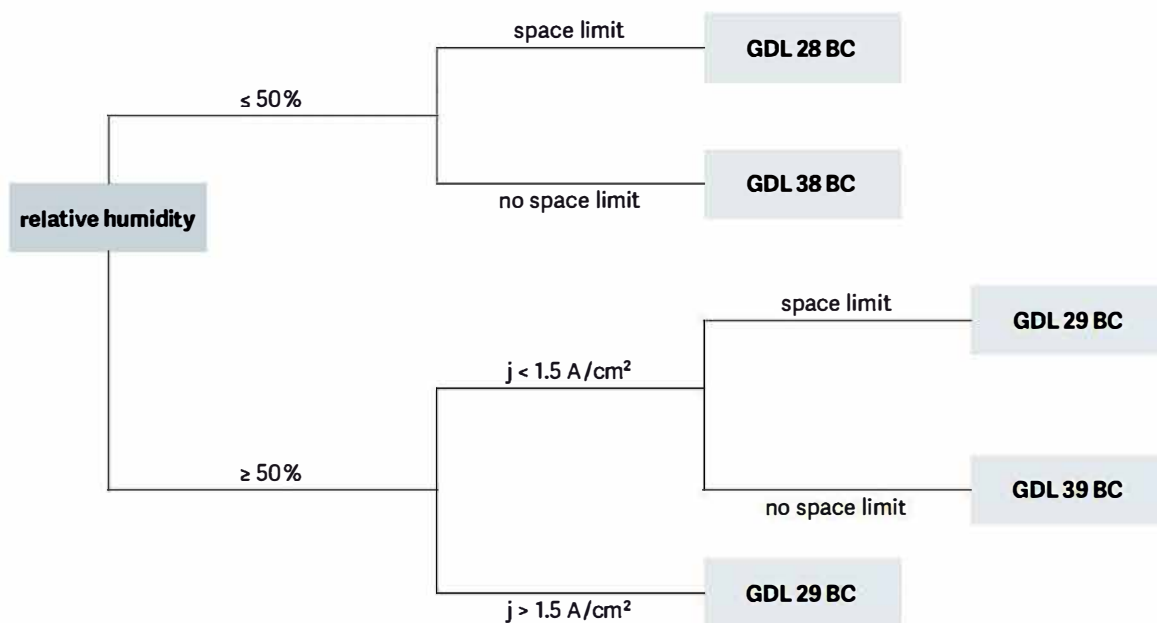

Forms supplied

We supply SIGRACET gas diffusion layers in roll form in lengths of 75 ± 25 m. Our standard roll width is 45 cm. Cut sheets are available at a surcharge.

Recommended SIGRACET® GDL grades for your application

Fuel cell applications	Characteristics	Recommended grades
Stationary	dry operation or $< 1.5 \text{ A/cm}^2$	28 BC, 38 BC
	wet operation/low pressure or $> 1.5 \text{ A/cm}^2$	39 BC
Portable		39 AA/39 BC
Automotive	high current densities	29 BC
	large channel width for making GDEs	28 BC
HT-PEM		38 BC
DMFC		28 AA/28 BC/29 AA/29 BC
PEM-electrolysis		39 AA/39 BC
